

## Assignment 6 – GUI Application

Kimo's 10 Dollar T-shirt shop sells all of their t-shirts for you guessed it \$10.00. Kimo needs you to create a Java GUI application (using GUI Builder or JavaFX) that has the user enter the number of t-shirts he/she would like to buy and displays the total cost (number of t-shirts \* cost + sales tax (4.167%)). Include appropriate labels and text fields and at least 3 buttons (one to calculate the total cost, clear the text fields and exit the program).

Your GUI app may look something like the figure below

**Kimo's 10 Dollar T-Shirt Company**

Quantity	<input type="text"/>
	<input type="text"/>
Total Cost	<input type="text"/>
